

AI ROAST GENERATOR

1. First prompt

C++ name-based roast generator ▾

write a c++ program which produces roast based on a user's name every time it runs.
the program should take user name and replaces user's like {name} with the actual input.

Check frontend design skill >

Here's a C++ program that uses the Anthropic API internally to generate a fresh, personalized roast every time it runs:

Created a file, read a file >

Here's everything you need to get it running:

Dependencies

1. **libcurl** — for the HTTP call to Claude

Roast generator - CPP

Copy ▾

↺ ↻ ✕

```
1  /*
2  * roast_generator.cpp
3  *
4  * Compile:
5  *   g++ -std=c++17 roast_generator.cpp -lcurl -o roast_generator
6  *
7  * Run:
8  *   ./roast_generator
9  *
10 * Requires:
11 *   - libcurl (sudo apt install libcurl4-openssl-dev / brew install curl)
12 *   - nlohmann/json (header-only, download json.hpp from https://github.com/nlohmann/json)
13 *   - ANTHROPIC_API_KEY environment variable set
14 */
15
16 #include <iostream>
17 #include <string>
18 #include <cstdlib>
19 #include <stdexcept>
20 #include <curl/curl.h>
21 #include "json.hpp"          // nlohmann/json single-header
22
23 using json = nlohmann::json;
24
```

2. Incorrect Output

FOCP-II- Assignments > AI_RoastGenerator.cpp > main()

```
246
247 #include <iostream>
248 #include <string>
249 #include <cstdlib>
250 #include <stdexcept>
251 #include <curl/curl.h>
252 #include "json.hpp"          // nlohmann/json single-header
253
254 using json = nlohmann::json;
255
256 // — libcurl write callback —————
257 static size_t WriteCallback(void* contents, size_t size, size_t nmemb, std::string* out)
258 {
259     size_t total = size * nmemb;
260     out->append(static_cast<char*>(contents), total);
261     return total;
262 }
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

Code + ▾ □ ✕ ...

compilation terminated.

```
PS C:\Users\Admin\bhoomi project\FOCP-II- Assignments> cd "c:\Users\Admin\bhoomi project\FOCP-II- Assignments\" ; if
++ AI_RoastGenerator.cpp -o AI_RoastGenerator } ; if ($?) { .\AI_RoastGenerator }
AI_RoastGenerator.cpp:251:23: fatal error: curl/curl.h: No such file or directory
#include <curl/curl.h>
^
```

compilation terminated.

```
PS C:\Users\Admin\bhoomi project\FOCP-II- Assignments>
```

3. Second prompt

remove the `#include <curl/curl.h>` and generate a new code without also make sure that in the code the program produces different roasts each time it runs by randomly selecting from multiple roast templates. Make the code beginner friendly. Dont include the header files that are not needed

The error is because `curl` isn't installed on Windows. I'll rewrite the program to use **Windows' built-in WinINet** library — no installs needed — and also remove the `json.hpp` dependency by parsing the response manual ↓

4. Correct Output

```
-----
The only thing sharp about you, Alice, is your elbows.
-----
(Don't take it personally, Alice. We roast the ones we... tolerate.)

PS C:\Users\Admin\bhoomi project\FOCP-II- Assignments> cd "c:\Users\Admin\bhoomi project\FOCP-II- Assignments\" ; if ($?) { g
++ AI_RoastGenerator.cpp -o AI_RoastGenerator } ; if ($?) { .\AI_RoastGenerator }
=====
Welcome to Roast-O-Matic!
=====
Enter your name (if you dare): Alice

*** ROAST OF THE DAY ***
-----
I'd insult your intelligence, Alice, but that would require you to have some.
-----
(Don't take it personally, Alice. We roast the ones we... tolerate.)
```
