

Student Excuse Generator

1. First Prompt

Write a c++ console-based program that generates creative excuses for missing homework or assignments. The program should generate different excuses each time it runs. Takes user input and replaces placeholders like {name} with the actual input

Here's a clean, console-based C++ program that generates creative excuses with placeholder replacement and randomness on each run.

Key Features

- Takes user input (name , subject , etc.)
- Uses a pool of excuse templates
- Randomly selects one each time
- Replaces placeholders like {name} , {subject}

2. Incorrect Output

FOCP-II- Assignments > StudentExcuseGenerator.cpp > ...

```
1  #include <iostream>
2  #include <vector>
3  #include <string>
4  #include <ctime>
5  #include <cstdlib>
6
7  using namespace std;
8
9  // Function to replace placeholders
10 string replacePlaceholders(string text, string name, string subject) {
11     size_t pos;
12
13     // Replace {name}
14     while ((pos = text.find("{name}")) != string::npos) {
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

Code + - [] ✕ ..

```
PS C:\Users\Admin\bhoomi project\FOCP-II- Assignments> cd "c:\Users\Admin\bhoomi project\FOCP-II- Assignments\" ; if ($?) { .\StudentExcuseGenerator }
++ StudentExcuseGenerator.cpp -o StudentExcuseGenerator } ; if ($?) { .\StudentExcuseGenerator }
Enter your name: Priya
Enter subject/assignment name: Physics

--- Your Excuse ---
I was about to submit the Physics, but my file got corrupted mysteriously.
PS C:\Users\Admin\bhoomi project\FOCP-II- Assignments>
```

3. Second Prompt

I dont need subject as an input just keep name as an input. And for the output I need it as {name} excuse

Understood—you want a simpler interface and a fixed output format.

✓ Changes applied

- Removed `{subject}` entirely
- Only input: `name`
- Output format:

`<name> <excuse>`

4. Correct Output

FOCP-II- Assignments > StudentExcuseGenerator.cpp > main()

```
1  #include <iostream>
2  #include <vector>
3  #include <string>
4  #include <ctime>
5  #include <cstdlib>
6
7  using namespace std;
8
9  // Function to replace {name}
10 string replaceName(string text, string name) {
11     size_t pos;
12     while ((pos = text.find("{name}")) != string::npos) {
13         text.replace(pos, 6, name);
14     }
15     return text;
16 }
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

Code + - [] [X]

```
PS C:\Users\Admin\bhoomi project> cd "c:\Users\Admin\bhoomi project\FOCP-II- Assignments\" ; if ($?) { g++ StudentExcuseGenerator.cpp -o StudentExcuseGenerator } ; if ($?) { .\StudentExcuseGenerator }
```

Enter your name: Priya

--- Generated Excuse ---

Priya accidentally deleted the file at the last moment.
